Member Virginia Press Association

Second-class matter at the Post-office at Appomattox, Va., Act of Congress of March 3, 1879.

Address all correspondence to The Times-Virginian, Appomattox, Va.

Subscription Rates: \$1.50 per year, 75c six months. Payable in advance.

Advertising rates upon request.

MEMORIAL DAY

We can't get excited by King Victor Emmanuel's declaration of war. It is so obvious that Italian people are at war we would be over-confident to expect much help from our struggle against

Italy. The significance is Portugal's declaration of war against Germany. That may be the victory of several important victories for the United States. Argentina will probably get involved in the war. Italy's her war with Russia.

Cake Finally Catches Up With Yankee Sergeant

SAN DIEGO.—Well preserved in French wine, a fruit cake mailed in Natchez, Miss., finally reached its destination here following a circuitous journey of several thousand miles.

The recipient, Marine Serg. William H. Covington, disclosed the history of the eight-pound delicacy after it had been mailed to him by his grandmother, Mrs. Mary Chisholm, last October.

Addressed to a unit from which Covington had subsequently been detached, the cake was returned to the South Pacific base where the marine's former outfit had gone.

It fell by coincidence into the hands of Pvt. Robert L. Arway, who knew that Covington was still in San Diego. He sent it back to the mainland.

On receipt of it here, Covington sought out Arway's wife and gave her a portion of the cake. Mrs. Arway immediately sent it on its travels, again — to her husband across the Pacific.

Price of Toy Books Is Limited, Writing of OPA

WASHINGTON.—Toy books are defined as "boys," or juvenile playthings, and are under strict price control, the Office of Price Administration has announced.

OPA said they should not be confused with "children's books," which include study exercises, story and picture books designed to be studied, looked at or read, and which are exempt from price control.

According to the OPA interpretation, "toy books" are those conceived by designers to be enjoyed in some form of active play. They include cut-out books, coloring books, tracing books, pasting books, model books and pouring books.

These are exempt from price control, but those which are designed to be studied, looked at or read, and which are exempt from price control.

Pre-Induction Program of High Schools

JUST WHAT IS PRE-INDUCTION TRAINING?

Since America entered the war, there has been talk about what the schools could do to help.

Pre-induction training has been the answer to the school people have not always been clear as to just what a pre-induction training was.

It is giving the youth a scientific and mathematical training.

There was good reason for the training. Not until Army training could our great military machine be well underway could the Army itself know the exact way in which schools could help.

A civilian Pre-Induction Training Branch of the War Department has been established to determine these ways. Its job is to study the Army situation, to make training manuals, to examine training manuals, to make training manuals, to examine training manuals.

It is because of this squeeze which is used in making ammunition brass, that a rifle is more than just a handle for a bayonet, and U. S. tanks and airplanes are the terror of the Axis.

Pressure, like noise, is the keynote of all ammunition making, particularly in the brass mill.

Here in a changing quarter-mile long inferno, they squeeze huge 2,500-pound slabs of brass into sleek, shiny coils from which machine gun and rifle ammunition is made.
